DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claim 1 is withdrawn in view of the newly discovered reference(s) to Friedman et al. and Kusano et al. Rejections based on the newly cited reference(s) follow.
2. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
3. Claims 4 and 10 are allowed.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent No. 6,239,703 to Friedman et al. in view of Japanese patent No. 363230845A to Kusano et al.

Friedman et al. teaches a semiconductor device with a conductor (80) on a substrate. Friedman et al. does not teach a conductor comprising aluminum as a main constituent and containing copper and nickel. Kusano et al. teaches a conductor comprising aluminum as a main constituent and containing copper and nickel. It would have been obvious to one of ordinary skill in the art to incorporate conductor taught by

Kusano et al. into the device taught by Friedman et al. since it is a known material that is suitable for the intended use.

Regarding claim 2, neither Kusano et al. nor Friedman et al. teach a semiconductor device, wherein the spacing of the conductors is not more than 0.4 microns. It would have been a matter of obviousness for one having ordinary skill in the art to arrive at the optimal spacing of the conductors through routine experimentation.
